

Scott Glascott HW 4:

1) Missing database driver:

To get this error I simply removed the db driver path string in cdUtils/dbConn.java

2) Database Unreachable:

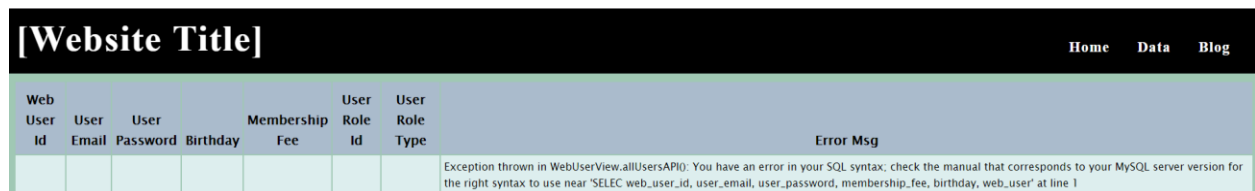

To get this error I wasn't tunneled into the temple network

3) Database Not Authorized:

To get this error I changed the stored password so it was wrong, I also tried removing the password.

4) Syntax error in sql statement:

I forced this error by removing the T in SELECT to cause a syntax error.

5) Error extracting Data from Result Set( Bad Column Name):

[Website Title]							Home	Data	Blog
Web User Id	User Email	User Password	Birthday	Membership Fee	User Role Id	User Role Type	Error Msg		
							Exception thrown in model.webUser.StringData (the constructor that takes a ResultSet): Column 'web_user_id' not found.		
							Exception thrown in model.webUser.StringData (the constructor that takes a ResultSet): Column 'web_user_id' not found.		
							Exception thrown in model.webUser.StringData (the constructor that takes a ResultSet): Column 'web_user_id' not found.		

To get this I changed the column I changed the “getObject” attribute in StringData.java

6) Error extracting Data from Result Set(Wrong data type):

[Website Title]	
Web User Id	User Email
1	bad Integer in FormatUtils:donald.j.otto@temple.edu Error:java.lang.String cannot be cast to java.lang.Integer
2	bad Integer in FormatUtils:test@gmail.com Error:java.lang.String cannot be cast to java.lang.Integer
3	bad Integer in FormatUtils:mod@gmail.com Error:java.lang.String cannot be cast to java.lang.Integer

To get this error I called the wrong Format Utility in StringData.java
